HINTS & SOLUTIONS

1. (1)

2. (5)

3. (2)

4. (3)

5. (1)

6-10.

Professors	Subject			Buildings
	English	Mathematics	History	
G	√	x	x	Three
H	x	x	√	Six
I	x	√	x	Five
J	x	x	√	Seven
K	√	x	x	Four
L	x	√	x	One
M	x	√	x	Two

6. (4)

7. (2)

8. (3)

9. (1)

11. (1)

10. (5)

Why was the airport was put on a full alert? The authority must be assuming assumption I. Hence, Assumption I is implicit but II is not. Again, to put the airport on a full alert indicates that the authority must be assuming assumption III also.

12. (1)

Only assumption I is implicit. III is not implicit because the reason behind this decision is that the witnesses or victims can't be felt any problem regarding the case. They can be pressurized by the accused to change their witnesses. The decision is not given because of the court's immediate concern for the victims.

13. (5)

Only I follows. What is being told is genuine. On learning this, the blood donors will get attracted by the win-win proposition, thus simultaneously meeting the blood requirement to a large extent. Statement II is not a

practical course of action. Statement III is not an immediate course of action as blood banks can be created only after the sufficient blood donors are available.

14. (4) Action I is the right course of action because training to the staff as to safety aspects of handling explosive material will reduce the chances of such accidents in future. Action II is also a right course as it will work as deterrent to check any negligence, in such work.
15. (3) statement (c) is the correct option because according to this the increase in crime rate has been contributed by other factors, not leniency in the punishment. so it weakens the given passage.

16 – 20.

Student	Subject	Sport
P	Biology	Cricket
Q	History	Badminton
R	Philosophy	Hockey
S	Geography	Basket Ball
T	English	Football
V	Physics	Table Tennis
W	Chemistry	Volleyball

16. (2)
18. (4)
21-25.

21. (3)
23. (3)
26. (2)

Only I and III statements are necessary.

27. (3)

I. R A _ G II. N _ E
III. A _ _ E

Statements I and II are sufficient to answer.

28. (2) From I- Neetu's rank will be helpful in obtaining Babita's rank and the latter's rank will be helpful in obtaining Ritika's rank.
From II & III – Kamla's rank will be helpful in obtaining Babita's rank and the latter will be helpful in obtaining Ritika's rank.
29. (5) From The first statement S can be either mother or father of T. From the second statement we can say that G is the mother of T. So we can say that S is not the mother of T. Hence the answer can be obtained from I & II both statements.
30. (3) From statement I, K is facing the centre and A is third to the right of K. Now if A is facing the centre, the person on his second right should be K but it is given B. So A is not facing the centre i.e. all of them are not facing the centre.

31. (5)

Similarly from statement II, if all are facing the centre, then second to the right of C should be F but it is given as K which means all of them are not facing the centre.

32. (3)

The conclusion of the argument is that landmark preservation laws deprive landlords of their right to use their own property. (e) comes to grips with this assumption by nothing that a landmark building may not be purely private property and some part of building may belong to the community at large. (a) does not valid as it represents only a partial attack on argument.(b) strengthens the claims that landmark preservation laws represent an unwanted interference with the rights of the landlord.

The argument states that people who follow the appropriate strategies for counteracting their genetic susceptibilities to disease will never get sick. How can it be that they would never get sick? The argument requires an assumption about the cause of all sickness that every known disease of humans must correspond to some genetic susceptibilities. So (c) is the correct option.

20. (5)

33. (4)

The author argues for the following connection: videos take money away from movies. What choices (d) asserts, in effect, is that the money spent on videos came from some other source.so,(d) statement undermines the given passage.

34. (2)

A hike in fees is no means to make the students more serious in studies. So, argument I is vague. However, with the increase in fees, poor meritorious students would not be able to afford post-graduate studies. So, argument II holds.

25. (1)

35. (2)

Oil, being an essential commodity, our country must keep it in reserve. So, argument I is vague, while argument II holds as it provides a substantial reason for the same.

- 36-40.

FRIENDS	COLLEAGUE	MARKET	ITEMS
G	M/N	Janpath	Clothes
H	X	Lajpat	Jewellery

36. (3)

37. (3)

38. (3)

39. (5)

40. (4)

- 41-45.

Input: next 57 problem 82 14 trend 02 purchase growth 41
Step I :growth next 57 problem 82 14 trend 02 purchase 41
Step II :growth 02 next 57 problem 82 14 trend purchase 41
Step III : growth 02 next 14 57 problem 82 trend purchase 41
Step IV : growth 02 next 14 problem 57 82 trend purchase 41
Step V : growth 02 next 14 problem 41 57 82 trend purchase
Step VI : growth 02 next 14 problem 41 purchase 57 82 trend
Step VII : growth 02 next 14 problem 41 purchase 57 trend 82

41. (4)

42. (3)

43. (4)

44. (3)

45. (4)

46-50.

46. (3)

47. (5)

48. (4)

49. (4)

50. (2)

51. (3)

M.P. of mobile handset = $\frac{3325}{95} \times 100$
 = 3500 Rs.
 \therefore tax = $\frac{20}{100} \times 3500$
 = 700 Rs.
 \therefore Total discount = (3500 – 3325) + 700
 = 875 Rs.

52. (2)

Alcohol in First Mixture = $\frac{3}{7}$
 Alcohol in second mixture = $\frac{5}{11}$
 Alcohol in Final mixture = $\frac{4}{9}$
 $\therefore \frac{3}{7} \times \frac{4}{9} = \frac{5}{11} \times \frac{1}{63}$
 \therefore Ratio = $\frac{1}{99} : \frac{1}{63} = 7 : 11$
 \therefore Required quantity = $\frac{7}{18} \times 18 = 7$ litres

53. (3)

The amount of petrol left after 4 operations = $200 \left(1 - \frac{40}{200}\right)^4$
 = 81.92 litres
 \therefore amount of kerosene = 200 – 81.92
 = 118.08 litres

54. (5)

$P = \frac{1000 \times 100}{4 \times 5} = 5000$ Rs.
 Required C.I. = $10000 \left[\left(1 + \frac{5}{100}\right)^2 - 1 \right]$
 = $10000 \times \frac{41}{400} = 1025$ Rs.

55. (1)

Required Area of the shaded region
 = $(16)^2 - \left[\frac{1}{2} \times 6 \times 8 + \frac{1}{2} \times 8 \times 6 + \frac{1}{2} \times 16 \times 10 \right]$
 = 256 – 128
 = 128 cm²

56. (4)

(A + B)'s 4 days work = $\frac{4}{8} = \frac{1}{2}$
 B's 2 days work = $\frac{2}{12} = \frac{1}{6}$
 \therefore Remaining work = $1 - \left(\frac{1}{2} + \frac{1}{6}\right)$
 = $\frac{1}{3}$
 $\therefore \frac{1}{3} = \frac{4}{12} = 4$ days = days that C require

57. (3)

Let the time taken by train A when it meet = t
 Let the time taken by train B when it meet = (t – 1)
 $\therefore 60t + 75(t - 1) = 330$
 T = 3 hrs
 \therefore both train will meet at 11 AM.

58. (2)

Speed of current = 4 km/hr
 Speed of rowing in still
 Water = x km/hr
 Distance (d) = $\frac{42}{2} = 21$ km
 Then, $\frac{21}{x-4} = 2 + \frac{21}{x+4}$
 $21 \left(\frac{1}{x-4} - \frac{1}{x+4} \right) = 2$
 $x^2 = 100$
 x = 10 km/h

59. (3)

Let amount = 100
 \Rightarrow for compound interest $\Rightarrow 100 \rightarrow 121$
 Simple interest $\Rightarrow 100 \rightarrow 120$
 $\Rightarrow 1 \rightarrow 28$
 \Rightarrow Principal = 2800
 $\Rightarrow 2800$ when, compounded half-yearly.

3403.41 C.I.
 3360 S.I.

Difference = 43.41

60. (1)

Profit ratio of A, B and C is (1200 × 12) : (x × 9) : (y × 6) = 2 : 3 : 5
 Taking first and second terms we get
 1200 × 12 : 9x = 2 : 3
 1200 × 12 × 3 = 9x × 2
 $\therefore x = \frac{1200 \times 12 \times 3}{18} = 2400$

61. (4)

Females in D3 (Cipla) = $18000 \times \frac{18}{100} \times \frac{4}{9} = 1440$
 Females in D3 (Surya) = $17500 \times \frac{18}{100} \times \frac{7}{15} = 1470$
 Total = 1440 + 1470 = 2910

62. (1)

Males in D5 (Cipla) = $18000 \times \frac{10}{100} \times \frac{4}{5} = 1440$
 Males in D6 (Cipla) = $18000 \times \frac{14}{100} \times \frac{7}{10} = 1764$
 Average = $\frac{1440 + 1764}{2} = 1602$

63. (3)

Females in D1 (Surya) = $\frac{24}{100} \times 17500 \times \frac{3}{7} = 1800$
 Males in D3 (Cipla) = $\frac{18}{100} \times 18000 \times \frac{5}{9} = 1800$

64. (2)

Females in D1 (Cipla) = $\frac{20}{100} \times 1800 \times \frac{5}{9} = 1500$
 Female in D4 (Surya) = $\frac{16}{100} \times 17500 \times \frac{5}{14} = 1000$
 Ratio = 1500 : 1000
 = 3 : 2

65. (5)

Females in D5 (Cipla) = $\frac{10}{100} \times 1800 \times \frac{1}{5} = 360$
 Female in D5 (Surya) = $\frac{10}{100} \times 17500 \times \frac{3}{10} = 525$
 Difference = 165

66. (2)

A \rightarrow Profit percent = 25%
 B \rightarrow Let CP = x,
 SP = 1.25x
 New CP = x + 500
 Profit percentage = $\frac{1.25x - (x + 500)}{x + 500} \times 100 = \frac{100}{9}$
 x = 4000
 Profit = 1000 Rs.
 C \rightarrow C.P. = x
 S.P. = 0.85(x + 1000)
 $\frac{0.85x + 850 - x}{x} \times 100 = 25 - \frac{75}{4}$
 x = 4000
 Profit = (5000 – 4000)
 = 1000 Rs.

67. (5)

So A and either B or C are sufficient.
 AS we don't know the time for which Rinku borrowed the amount, so the rate of interest can't be determined

68. (5)

Let the speed of boat in still water and speed of stream be x and y respectively.
 St A — $\frac{45}{x+y} = 3 \Rightarrow x+y = 15$
 St B — $y = \frac{1}{4}x \Rightarrow x = 4y$
 St C — $\frac{36}{x-y} = 4 \Rightarrow x-y = 9$
 So, any two of the three statements are sufficient to answer the question.

69. (4)

St A — Lengths = 4x, 5x
 St B — ratio of speed = 1 : 2
 St C — speed of 1st train = 36 km/hr
 From B and C
 Speed of second train = 72 km/hr
 As we don't know the directions of their motion so relative speed can't be determined

Grand Test – ISP 171204

70. (4) St. C — $\frac{\sqrt{3}}{4} a^2 = 16\sqrt{3}$, from here side of the equilateral triangle and height can be calculated.
 St. B — Side of triangle = $\frac{48}{3 \times 2} = 8$
 $h = \frac{\sqrt{3}}{2} a$
 St. A — no conclusion
 So using either B or C alone we can find the height.

71. (4) Average annual growth rate
 $= \frac{1}{2} \times \left[\frac{(4600 + 3800 + 1800) - (3820 + 2460 + 544)}{(3820 + 2460 + 544)} \right] \times 100$
 $= \frac{1}{2} \times \frac{(10200 - 6824)}{6824} \times 100$
 $= 24.73\%$

72. (1) Average amount spent in 1998
 $= \frac{3820 + 2460 + 544}{3} = \frac{6824}{3} = 2274.66$
 ≈ 2275
 Req. percentage = $\frac{3800 - 2275}{2275} \times 100$
 $= \frac{1525}{2275} \times 100 = 67.03\%$

73. (2) Req. Percentage = $\frac{\frac{25}{100} \times 610}{(4120 + 2900 + 610)} \times 100$
 $= \frac{15250}{7630} = 1.99\%$
 $\approx 2\%$

74. (3) Difference
 $= \frac{(2460 + 544 + 2900 + 610 + 3800 + 1800)}{(3820 + 4120 + 4600)}$
 $\approx \frac{12114 \sim 12540}{3}$
 $= \frac{426}{3} = 142$

75. (2)

Year	% share of print media
1998	55.97%
1999	53.99%
2000	45.09%

76. (3) Req. Ratio = $\frac{\frac{48}{360} \times 4800}{\frac{60}{100} \times \frac{48}{360} \times 4800 + \frac{30}{100} \times \frac{39}{360} \times 7200}$
 $= \frac{640}{384 + 234} = \frac{640}{618} = \frac{320}{309}$

77. (4) Req. Percentage = $\frac{\frac{196}{360} \times 7200}{\frac{360}{360} \times 14400} \times 100 = 39.83\%$

78. (1) Expense on education
 $= \frac{48}{360} \times 4800 + \frac{70}{360} \times 7200 = 2040$
 Expense on rent = $\frac{90}{360} \times 4800 + \frac{70}{360} \times 7700 = 2600$
 Req. percentage = $\frac{(2600 - 2040)}{2600} \times 100 = 21.53\%$

79. (5) Req. ratio = $\frac{\frac{18}{360} \times 4800}{\frac{39}{360} \times 7200} = \frac{4}{13}$
 (Note: Doubled expenses don't alter the ratio)

80. (1)

Item	Difference
Clothing	$\frac{56}{360} \times 7200 - \frac{60}{360} \times 4800 = 320$
Rent	$1400 - 1200 = 200$
Food	$2200 - 1280 = 920$
Misc.	$780 - 640 = 140$
Light	$300 - 240 = 60$
Education	$1400 - 640 = 760$

81. (3) $6 \times 2 = 12, 12 \times 3 = 36, 36 \times 4 = 144, 144 \times 5 = 720 \neq 722$
 $21^3 = 9261, 19^3 = 6859 \dots \dots \dots, 11^3 = 1331 \neq 1321$

82. (1)
 83. (4) All are prime numbers except 57
 84. (1) Three are two series
 $8, 16, 32, 64, \& 12, 24, 48, 96, \neq 98$

85. (4) $2 \times 7 - 1 = 13, 13 \times 6 - 2 = 76, 76 \times 5 - 3 = 377, 377 \times 4 - 4 = 1504 \neq 1506$

86. (3) Required Answer = $\frac{35}{100} (30 + 15 + 15)$
 $= \frac{35 \times 60}{100} = 21 \text{ lakh}$

87. (1) It can be clearly seen from the graph that maximum variation in production in production is of aircel sim cards = $(40\% \text{ of } 44 \text{ lakh} - 30\% \text{ of } 35 \text{ lakh}) = 7.1 \text{ lakh}$

88. (1) Required difference = $\frac{44 \times 20}{100} - \frac{35 \times 15}{100}$
 $= \frac{880 - 525}{100} = \frac{355}{100} \text{ lakh} = 355000$

89. (2) Required production = $\frac{44 \times 30}{100} \text{ lakh} = 1320000$

90. (3) Required No. = $35 \times \frac{10}{100} \times \frac{15}{100} + 44 \times \frac{10}{100} \times \frac{15}{100}$
 $= \frac{150}{10000} \times 79 = 1.1850 \text{ lakh} = 118500$

91. (4) Ratio of investments of A, B and C
 $= \left(\frac{7}{2} \times 4 + \frac{105}{20} \times 8 \right) : \frac{4 \times 12}{3} : \frac{6 \times 12}{5}$
 $\Rightarrow 56 : 16 : 14.4$. Therefore, B' share = $\frac{16}{86.4} \times 21600 = \text{Rs. } 4,000$.

92. (3) Three vowels can be placed in 3 odd places in ${}^3C_3 \times 3!$
 $= 6 \text{ ways}$
 Total ways = $6 \times 3! = 36$

93. (4) Taking 3 particular persons as single entity, we have $12 - 3 + 1 = 10$ persons to be seated.
 No. of ways of seating these 10 persons = $(10 - 1)! \times 3! = 9! \times 3!$
 Total no. of ways of seating 12 persons = $(12 - 1)! = 11!$
 Required probability = $\frac{9! \times 3!}{11!} = \frac{3 \times 2}{11 \times 10} = \frac{3}{55}$

94. (1) Let no. of wickets = x
 Total runs given till last match = $12.4 \times x$
 $\frac{12.4x + 26}{x + 5} = 12, x = 85$

So the ratio of all types of pen = 4 : 3 : 2
 No. of pens = 200, 150, 100
